# DIGITAL LITERACY

## PROJECT REPORT

**Name :- Alok kumar**
**Reg No :- 25BAC10031**
**Branch :- ECE**
**Year :- 1st Year**

**Date :- 31st March 2026**

# TOPICS

#1 Introduction
#2 Digital Literacy Awareness Infographic
#3 Digital Portfolio
#4 Coding & Collaboration Platforms
#5 Professional Email & Etiquette Guide
#6 Cybercrime Awareness Case Study & Prevention Guide
#7 Conclusion
#8 References

# INTRODUCTION

In today’s digital age, having strong digital literacy skills is essential for students. Digital literacy is the ability to use technology effectively, responsibly, and safely to access, evaluate, create, and communicate information. With the widespread use of online learning, social media, and digital payment systems, students must not only be proficient in various digital tools but also aware of the risks associated with the online environment.

This project aims to enhance understanding of digital literacy and online safety through practical activities such as creating infographics, professional profiles, quizzes, and cybercrime case studies. It covers important topics like safe internet practices, professional online presence, email etiquette, and cybercrime prevention. By completing these tasks, students develop skills that help them navigate the digital world efficiently, protect themselves from cyber threats, and present themselves professionally online. The knowledge gained through this project will be valuable for academic success, personal safety, and future career development.

# Task 1 - Digital Literacy Awareness Infographic

For this task, I used Canva to design my infographic because it is an easy-to-use and free online design tool with a wide range of templates and visual elements. My infographic is titled “Digital Literacy Essentials for Students” and it highlights key topics such as digital literacy, useful digital tools, safe internet practices, professional online presence, and email etiquette.

The design is divided into clear sections, each with a heading and short bullet points to make the information simple and easy to understand. I used icons, colors, and proper alignment to make the infographic visually appealing and engaging for students. The aim of my design is to provide quick and useful knowledge that students can apply in their academic and daily digital life.

One thing I found interesting while creating this infographic was how important layout and visual balance are in making content effective. The most challenging part was organizing the information in a limited space without making it look crowded. Overall, this activity helped me improve both my digital design skills and understanding of digital literacy.

# Task 2 - Digital Portfolio

For this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. These platforms are widely used by students and professionals to build their online presence and showcase their skills.

GitHub is mainly used for sharing and managing code. I created a profile README repository where I added my name, branch, year, and my learning goals. I plan to use GitHub over the next four years to upload my projects, collaborate with others, and improve my coding skills.

LinkedIn is a professional networking platform. I updated my Education section with my current degree, institution, and expected graduation year. In the future, I will use LinkedIn to connect with professionals, explore job opportunities, and build a strong professional identity.

Kaggle is a platform for data science and machine learning. It provides datasets and competitions. I plan to use Kaggle to practice data analysis, participate in competitions, and enhance my problem-solving skills.

Overall, these platforms will help me grow academically and professionally, and prepare me for future career opportunities.

# Task 3 - Explore Coding & Collaboration Platforms

For this task, I used Google Forms to create a “Digital Literacy Awareness Quiz” for my batchmates. Google Forms is a simple and effective tool for creating surveys, quizzes, and collecting responses in an organized manner. I designed a quiz consisting of five questions, including multiple choice and short answer types, to test basic knowledge about digital literacy, safe internet practices, and online behavior.

While creating the form, I also explored features like adding answer options, marking correct responses, and customizing the form layout. Additionally, I learned how responses are automatically recorded in Google Sheets, which makes data analysis easy and efficient.

I also took screenshots of the form and the response sheet view and added them to the required folder. This activity helped me understand how digital tools can be used for academic purposes such as conducting quizzes, collecting feedback, and analyzing data.

In the future, I plan to use Google Forms for creating surveys, quizzes, and project data collection, which will be helpful in both my academic work and research activities.

# Task 4 - Professional Email & Etiquette Guide

Poor digital communication can often lead to serious misunderstandings. One common example is when a student sends a rude or unclear email to a professor without proper greeting or tone. This can create a negative impression and may affect the student's academic relationship with the teacher. In some cases, messages sent in anger or without thinking on social media can also lead to conflicts, misunderstandings, or even disciplinary action.

Such situations can be avoided by following basic digital communication rules. It is important to use polite language, think before sending messages, and review the content for clarity and tone. Adding proper greetings, being respectful, and avoiding emotional or impulsive responses can make communication more effective. Overall, responsible digital behavior helps maintain a positive online presence and prevents unnecessary problems.

# Task 5 - Cybercrime Awareness Case Study & Prevention Guide

While researching online safety and cybercrime, I was most surprised by how easily people can fall victim to scams, especially UPI fraud. Many attackers use simple tricks like fake calls or messages to create urgency and manipulate users into sharing sensitive information. I realized that even basic mistakes, such as clicking unknown links or approving payment requests without checking, can lead to serious financial loss.

This research made me more aware of the importance of being cautious while using digital platforms. One habit I will personally change is carefully verifying every payment request and link before taking any action. I will also make sure to never share OTPs or PINs, even if the request seems genuine. Overall, this activity has helped me understand that staying alert and informed is the best way to stay safe online.

# Conclusion

In conclusion, this project helped me understand the importance of digital literacy and responsible online behavior in today’s world. Through various tasks such as creating an infographic, building professional profiles, designing a quiz, and studying cybercrime, I gained practical knowledge about using digital tools effectively and safely.

I learned how to maintain a professional online presence, communicate properly through digital platforms, and protect myself from common cyber threats like phishing and UPI fraud. These activities also improved my technical, communication, and research skills.

Overall, this project has prepared me to use digital platforms more responsibly and confidently. The knowledge and skills I have gained will be useful not only in my academic journey but also in my future career. I will continue to apply these practices to stay safe, informed, and professional in the digital world.
